Able to learn fast

As a junior developer

Simple description

I've learned, and I'm still learning, different types of skills that are crucial to a developer, because as a junior developer I always try to stay informed about all the latest technologies released, to improve the skills I've already he had learned and cultivated a few others.

To keep myself practicing / focused, I had to do it, and I do some small projects just to get some fundamental knowledge about how things work when you are working on a Project, some of the ones I worked on can be seen in my GitHub account: <https://github.com/RobertoCarlosMedina> . Where you can also see all my small projects, all the ones I'm working on, from the front-end interfaces (like games, websites, etc.), through the implementation of some algorithms to the code base of a simple back-end. The programming languages that I worked on, and I'm currently working on, They are: Python, JavaScript (including NodeJs and ReactJs), C, SQL, Java, etc... and I have no problem switching from one programming language to another, based on neediness, because learning new things is the essential meaning of being a junior developer.

Experience

Store repository

Jom pipi .Lda Ribeira Grande, Santo Antão

February 2018 – October 2018

At this job i learned to deal whit different kind of people, also learn to speak properly whit them. As a first job it helps me to increase my responsibility and the ability to deal whit a group of people.

Tester and System Analyst.

Ramos Group Mindelo, São Vicente, Cabo Verde

June 2021 – Present

In this work I work as a tester and system analyst where I perform automation and validation tests using Selenium as a tool, and some appropriate tools for proper effect. Being a tester sometimes I end up doing front-end and back-end work if need be.

Education

Software Engineering and Telecommunication

Technical University of Atlantic Ribeira de Julião, Mindelo, São Vicente

I still find myself taking my course, with a forecast of finishing in 2022, where I will have finished my graduation.

Events I attended

Seed's For The Future

That's a program made by Huawei, where the main objective is to share knowledge, as a participant, I end up taking a certificate relative to my participation and also aggregating more knowledge to myself by the contents shared/taught for me and All the participant.
